TECHNICAL PRODUCT OWNER | ENTERPRISE PLATFORMS | AUTOMATION & DATA ANALYTICS

SUMMARY

Product Owner at Signify Digital, taking a stalled two-year platform adoption effort to production — owning requirements, vendor selection and release decisions across 15+ contributors in five teams. Hands-on engineer behind the CPQ configuration automation and the Datadog and Power BI dashboards the business and engineering teams run on. Founder of Athena, a state-grant-backed ed-tech marketplace, owning product and technical direction from first build through the current rebuild.

SKILLS

Product: Product Ownership, Requirements & Acceptance Criteria, Backlog & Scope Prioritisation, Roadmapping, Release Planning, Vendor Evaluation & RFP, Stakeholder & Dependency Management, Agile/Scrum

Technical: Python, FastAPI, LLM integration & RAG (Llama 2, sentence-transformers), Docker, AWS

Tools: Jira, Confluence, AEM (Adobe Experience Manager) Guides, Configit CPQ, Datadog, Power BI, Tableau, Moodle

PROFESSIONAL EXPERIENCE

Signify Digital — Bangalore | January 2025 – Present

Product Owner, AEM Guides (September 2025 – Present) · Digital Functional Engineer

Product Owner:

- Own delivery and production readiness for AEM Guides, a ~€50K/yr enterprise platform investment — restarting a stalled two-year adoption effort and consolidating documentation under the Adobe ecosystem to deliver reusable, on-brand content to a worldwide readership.
- Built the business case for specialist implementation with the technical lead and led a structured five-firm evaluation — scoring matrix, technical deep-dives and consultation with Adobe — to select the delivery partner.
- Validated requirements and acceptance criteria with the authoring team and technical lead for the statement of work — branding, reusable content and publishing outputs — and prioritised first-release scope, deferring machine-translation integration to protect cost and timeline. Established weekly build–test–feedback cycles with the partner.
- Coordinate 15+ contributors across five teams, managing onboarding, access, package-transfer and testing dependencies and clearing blockers that put the end-to-end testing window at risk; declined a deployment that would have bypassed agreed first-release testing.
- Resolved recurring AEM stability issues with Adobe and aligned previously siloed Assets and Guides teams with the external HCL testing team through shared release calendars and cross-team syncs.

Digital Functional Engineer:

- Built an internal tool that generates dependent JSON configuration rule sets from structured Excel/UI input, automating repetitive browser configuration and QA-to-production checks to cut turnaround from weeks to hours, with engineering retaining verification and deployment.
- Owned quote-to-order configuration logic for Signify's B2B enterprise lighting sales — pricing tiers, discount rules and multi-level approval workflows gating sales-rep discount authority against business-leader sign-off. Applied Lean principles across deployment workflows to eliminate manual waste.
- Designed Datadog dashboards for two distinct audiences — processing activity and service output for the business, execution-stage and VM health signals for engineering — scoping V1 and defining the V2 backlog before handing ownership to the team. Reduced escalation volume ~40%, shifted recurring escalation meetings to monthly service reviews and gave leadership direct visibility into team output.
- Built Power BI fault-analysis dashboards with Python-based multi-language translation.
- Facilitated Scrum, delivery reporting and budget/resource tracking across a distributed India–Netherlands team.

INDEPENDENT PRODUCT

Athena — Founder & Product Owner

- Lead product requirements, release scope, acceptance scenarios and roadmap for the current rebuild, a tuition marketplace intended to surface quality tuition centres over marketing spend — scoped as two modules, a native coursework (LMS) module and provider-operations tooling. Architecture and data modelling developed with an adviser.
- Evaluated six coursework approaches and chose to build the module natively rather than integrate Moodle, documenting trade-offs and the conditions for revisiting it; deferred live tutor Q&A to protect first-release scope.
- Earlier version: built a course-recommendation engine on Moodle with a self-hosted Llama 2 model, moving from fine-tuning to retrieval-augmented generation (sentence-transformers, FastAPI) to control hallucinations.
- Young Innovators Programme — state-level grant (₹75,000).

EDUCATION

B.Tech, Computer Science & Engineering — Mar Baselios College of Engineering and Technology, Trivandrum | 2021 – 2025

Vice-Chair, ISTE MBCET

CERTIFICATIONS

Lean Six Sigma Green Belt · Google Project Management Certificate

In progress: Professional Scrum Product Owner I (PSPO I) · AWS Certified Cloud Practitioner
